

# BREAST & CHEST CANCER

## Screening Is Preventive Care

Screening guidelines are based on sex at birth, age, and risk factors.

For transgender and nonbinary folx, screening recommendations are also based on your gender-affirming care journey.

## Breast Cancer Is a Queer Issue

Talk to your primary care provider about appropriate cancer screenings. Our website has a list of LGBTQI+ welcoming screening providers.

## We Have to Take Care of Each Other!

Queer people are more likely to use commercial tobacco and drink alcohol. This means our risk for breast/chest cancer may be higher than the general population.
