Summary of Findings

Significant Health Needs of the Community

The following "Areas of Opportunity" represent the significant health needs of the community, based on the information gathered through this Community Health Needs Assessment and the guidelines set forth in Healthy People 2020. From these data, opportunities for health improvement exist in the area with regard to the following health issues (see also the summary tables presented in the following section).

The Areas of Opportunity were determined after consideration of various criteria, including: standing in comparison with benchmark data (particularly national data); identified trends; the preponderance of significant findings within topic areas; the magnitude of the issue in terms of the number of persons affected; and the potential health impact of a given issue. These also take into account those issues of greatest concern to the community stakeholders (key informants) giving input to this process.

Areas of Oppo	rtunity Identified Through This Assessment
Access to Healthcare Services	 Barriers to Access Inconvenient Office Hours Appointment Availability Difficulty Accessing Children's Healthcare Routine Medical Care (Children)
Cancer	 Cancer is a leading cause of death. Cancer ranked as a top concern in the Online Key Informant Survey.
Diabetes	Diabetes Prevalence
Heart Disease & Stroke	 Cardiovascular disease is a leading cause of death. Heart Disease Prevalence Blood Pressure Screening High Blood Pressure Prevalence High Blood Cholesterol Prevalence
Injury & Violence	Unintentional Injury DeathsChild Seat Belt Use.
Mental Health	 Stress Suicide Deaths Mental Health ranked as a top concern in the Online Key Informant Survey.
Nutrition, Physical Activity, & Weight	 Low Food Access Perceive Self as "About the Right Weight" [Overweight Adults] Overweight & Obesity [Children] [Parents] Perceive Child as "About the Right Weight" Leisure-Time Physical Activity Children's Physical Activity
Oral Health	Children's Dental Care
Respiratory Diseases	Asthma Prevalence [Children]Pneumonia Vaccination [Age 65+]

Substance Abuse	 Cirrhosis/Liver Disease Deaths Excessive Drinking Binge Drinking Drinking & Driving Unintentional Drug-Related Deaths Illicit Drug Use Substance Abuse ranked as a top concern in the Online Key Informant Survey.
Tobacco Use	 Exposure to Environmental Tobacco Smoke (Nonsmokers) Use of Vaping Products Smokeless Tobacco Prevalence

Summary Tables: Comparisons With Benchmark Data

The following tables provide an overview of indicators in Suffolk County, including comparisons among the five geographic subareas, as well as trend data. These data are grouped to correspond with the Focus Areas presented in Healthy People 2020.

Reading the Summary Tables

In the following charts, Suffolk County results are shown in the larger, blue column. *Tip: Indicator labels beginning with a "%" symbol are taken from the PRC Community Health Survey; the remaining indicators are taken from secondary data sources.*

■ The green columns [to the left of the Suffolk County column] provide comparisons among the five geographic subareas, identifying differences for each as "better than" (\$), "worse than" (\$), or "similar to" (△) the combined opposing areas.

■ The columns to the right of the Suffolk County column provide trending, as well as comparisons between local data and any available state and national findings, and Healthy People 2020 targets. Again, symbols indicate whether Suffolk County compares favorably (\$), unfavorably (\$), or comparably (\$) to these external data.

Note that blank table cells signify that data are not available or are not reliable for that area and/or for that indicator.

TREND SUMMARY (Current vs. Baseline Data)

Survey Data Indicators:

Trends for survey-derived indicators represent significant changes since 2014. Note that survey data reflect the ZIP Code-defined Suffolk County.

Other (Secondary) Data

Indicators: Trends for other indicators (e.g., public health data) represent point-to-point changes between the most current reporting period and the earliest presented in this report (typically representing the span of roughly a decade).

Note that secondary data reflect county-level data.

Summary of Key Informant Perceptions

In the Online Key Informant Survey, community stakeholders were asked to rate the degree to which each of 20 health issues is a problem in their own community, using a scale of "major problem," "moderate problem," "minor problem," or "no problem at all." The following chart summarizes their responses; these findings also are outlined throughout this report, along with the qualitative input describing reasons for their concerns. (Note that these ratings alone do not establish priorities for this assessment; rather, they are one of several data inputs considered for the prioritization process described earlier.)

Key Informants: Relative Position of Health Topics as Problems in the Community

Major Problem Moderate Problem Minor Problem No Problem At All
